Why Back up Critical Data Online/Offsite?

Your financial records, contracts, and client information are the foundation of your business. When you consider all of the information stored on your company's servers, you begin to realize the potential magnitude of loss in the event of a disaster, sabotage, hardware failure, or human error. LiveVault allows you to back up your critical business data to a remote and secure location for rapid disaster recovery—an important part of your data security and business continuity plan. And with over 11,000 business clients worldwide, you can trust LiveVault to secure your critical business data.

LiveVault Business-Class Backup and Recovery

Since 1996, LiveVault has provided cloud data backup and recovery solutions for businesses. For a predictable monthly fee, LiveVault provides end-to-end encryption, tier 4 data center security, data center redundancy, and 24/7 US phone customer support for Advantage solution—far surpassing the industry norm. We offer data recovery in minutes, not days, helping to assure that your business will continue as usual even when faced with a significant data threat.

Why LiveVault Advantage?

LiveVault Advantage offers cloud data backup and recovery that saves critical business data at a secure offsite location. Scheduled backups run automatically without human intervention via our agentless technology. LiveVault Advantage is the perfect solution for servers running Microsoft Windows operating system with Exchange and SQL. Advantage is a cost effective solution for disaster recovery that meets the online backup requirements of most businesses.

LiveVault provides a world-class data protection infrastructure that lets you safeguard your data without additional capital or IT expenses. Data is backed up to an offsite location, optionally unlimited data backup to a local appliance for quicker recovery time and now the ability to store an image locally (ImagePlus) with no expensive appliance or hardware to purchase. Customizable retention policies allow you to meet regulatory compliance requirements. You can create backup sets with daily, weekly, monthly or yearly retention settings and user defined generations. LiveVault software only backs up the changes to the data on your protected system, minimizing server load and backup time.
